-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

1. Claims 1-20 are pending.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 5, 7, 12, and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Klein et al (US 20020156650).

As per claims 1, 5, 7, 12 and 19, Klein et al discloses communicating an address to a first network device via a secure tunnel to the Internet such that the first network device provides information corresponding to the address for use by a second network device; receiving encrypted information from the first network device via the Internet; enabling the encrypted information to be posted at the address; and enabling the second network device to access the address and retrieve the encrypted

information posted at the address also providing a decryption key (see paragraphs 58-59, 72, 77).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 4, 13-15, and 17-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Klein et al as applied to claims 1, 12 and 19 above, and further in view of Linden et al (US 6360254).

As per claims 2, 4, 13-15, and 17-18, Klein et al fails to disclose the use of one-time URLs.

However, Linden et al teaches the use of one-time URLs (see column 11 lines 17-28).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to make Klein et al's URLs one-time as taught by Linden et al.

Art Unit: 2137

Motivation to do so would have been to prevent the access of the webpage multiple times.

6. Claims 6, 8-10, 16, 20 rejected under 35 U.S.C. 103(a) as being unpatentable over Klein et al as applied to claims 1, 12 and 19 above, and further in view of Forslow (US 20020069278).

As per claims 6, 8-10, 16 and 20, Klein et al fails to disclose the use of wireless mobile devices.

However, Forslow teaches the use of mobile devices (see paragraphs 88 and 139).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to have Klein et al's clients be mobile devices as taught by Forslow.

Motivation to do so would have been to allow mobile users to select server resources.

7. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Klein et al as applied to claim 1 above, and further in view of Rosenberg et al (US 6363357).

As per claim 11, Klein et al fails to disclose printing the decrypted information.

However, Rosenberg et al teaches printing decrypted information (see column 6 lines 9-39).

Art Unit: 2137

At the time of the invention it would have been obvious to a person of ordinary skill in the art to use Rosenberg et al's method of printing to print Klein et al's information.

Motivation to do so would have been to allow a browser to render the information.

8. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over the modified Klein et al and Linden et al method as applied to claim 2 above, and further in view of Forslow.

As per claims 3, the modified Klein et al and Linden et al method fails to disclose the use of a firewall.

However, Forslow teaches a firewall (see paragraph 88).

At the time of the invention it would have been obvious to a person of ordinary skill in the art to have the modified Klein et al and Linden et al's clients be connected to the internet through a firewall as taught by Forslow.

Motivation to do so would have been to allow mobile users to select server resources.

#### **Conclusion**

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. March (US 6034605), Bowman et al (US 6751736), and Caldwell et al (US 20020046286) teach posting an encrypted webpage.
